

Geography intent

Learning to learn	At Woodlands, we believe through the teaching of Geography we can engage children in the world around them – both locally and globally. Children will be encouraged to discover answers to their own questions through exploration and research to enable them to gain a greater understanding and knowledge of their world. Our intent is that a high-quality geography education will inspire in pupils a curiosity and fascination about the world and its people that will remain with them for the rest of their lives.
Integration and application	Through our topics, we aim to equip pupils with knowledge about diverse places, people, resources and natural and man-made environments, together with a deep understanding of Earth’s key physical and human processes. Geographical knowledge, understanding and skills provide the framework and approaches that explain how Earth’s features at different scales are shaped, interconnected and change over time. Planned fieldwork will enable children to learn through first-hand experiences to enhance their understanding of geography.
Understanding and caring for the world around us	We aim to promote a learning environment in which children are open to asking and answering questions about the natural and human worlds, therefore encouraging them to develop a greater understanding of their world and their place in it. The children will learn how they can help to make a difference in the world and how they make an impact on the natural world.
